ITC Hotels Performance Dashboard

By- Arkadeep Banerjee

Problem Statement:

The objective of this project is to analyze the overall performance of ITC Hotels using Power BI. The goal is to transform raw hotel data into meaningful insights related to revenue, occupancy, room category performance, booking behavior, and cancellations.

The dashboard provides stakeholders with a multi-page analytical view that supports strategic decision-making, identifies trends, and highlights areas requiring attention such as lost revenue, booking patterns, and capacity utilization.
